TRIAGE Cross-Asset Radar

Export controls, claims, satellites and the regime — public data, sourced, honest about gaps

Layers	Data	Rules
Mining + Land, Macro, Alpha Committee	MOFCOM · BLM MLRS · Earth Search · USGS MCS · IMF COFER · FRED	public data · nothing sent

*As of 23 Oct 2026 (SGT). Public data only. Facts carry source + fetch date; **JUDGEMENT** marks our reads. Nothing sent.*

01 What this layer does

Joins (1) export-control events from MOFCOM primary text, (2) US federal mining-claim status around documented deposits of controlled minerals (BLM MLRS), (3) Sentinel-2 scene coverage at three sites (Earth Search STAC), (4) supply concentration (USGS MCS 2026) and (5) a Dalio-style macro regime. The target signal — *staking surge or lapse near a historically documented controlled-mineral deposit* — is only partly testable today; we say exactly where.

02 Backtest: junior/REE equities after Chinese export-control announcements

Excess return vs SPY (US) or ^AXJO (ASX), base = close before the announcement date. MOFCOM announcements land 17:00–18:00 Beijing, i.e. before the US open the same day.

EVENT (MOFCOM, PRIMARY)	TICKER	+1D	+5D	+20D

HORIZON	LEGS	MEAN EXCESS	MEDIAN	% POSITIVE
20d	13	-3.8%	-4.8%	38%

Honest read (JUDGEMENT): four events, overlapping tickers — this is an event study, not a statistically powered backtest. Legs are not independent (same day, same theme). The April 2025 event coincides with the US tariff sell-off, which the market adjustment only partly removes. Use as a playbook with a known small-n, not a proven edge.

Event sources (fetched 23 Oct 2026, quote = effective-date clause):

03 Claims around controlled-mineral deposits (BLM MLRS, fetched 2026-10-23)

Box = ±0.15° around a district centre (JUDGEMENT: hand-placed, MRDS blocked).

DISTRICT	MINERAL	ACTIVE	FILED/UNDER REVIEW	CLOSED	LAPSE RATIO
Mountain Pass (CA) — REE	REE	2,105	880 (42%)	4,785	0.69
Thacker Pass (NV) — lithium	Li	2,273	10 (0%)	8,136	0.78
Stibnite (ID) — antimony/gold	Sb	2,808	577 (21%)	3,533	0.56
Bear Lodge (WY) — REE	REE	574	99 (17%)	1,569	0.73
Rhyolite Ridge (NV) — lithium/boron	Li	1,642	333 (20%)	6,831	0.81

Caveat: Public MLRS layer has LOC_DT null for every record (count where LOC_DT IS NOT NULL = 0, both layers, checked 23 Oct 2026). Dated staking surges therefore cannot be backtested from this endpoint; 'Filed/Under Review' share is used as a live proxy for fresh staking.

Read (JUDGEMENT): Mountain Pass (42% of active claims still pending) and Stibnite (21%) show the heaviest fresh staking; Thacker Pass has ~0.4% pending against 8,136 closed claims — a lapse-dominated district. That fits the playbook (follow-on staking near a permitted controlled-mineral project) but is cross-sectional, not timed.

04 Satellite: Sentinel-2 L2A scenes (Earth Search STAC)

SITE	BEFORE (BEST ≤10% CLOUD)	AFTER	SCENES BEFORE/AFTER
Mountain Pass (CA) — REE	S2B_11SPV_20241016_0_L2A	S2C_11SPV_20261001_0_L2A	5/8
Thacker Pass (NV) — lithium	S2A_11TMG_20240927_0_L2A	S2C_11TMG_20260907_0_L2A	6/3
Stibnite (ID) — antimony/gold	S2B_11TPK_20241108_0_L2A	S2C_11TPK_20261007_0_L2A	13/13

Caveat: Whole-tile previews (110 km) — demonstrates the pipeline only; pit-scale change detection needs band COGs clipped to a site polygon (next step, rasterio not installed).

05 Supply concentration (USGS MCS 2026, net import reliance / top import source)

MINERAL	QUOTED LINE
Gallium	Gallium · 100% · 28%, CA · 22%, JP · 18%, CN · 16%, DE · 16%, OT

Central-bank gold buying	WGC Gold Demand Trends (central banks, tonnes)	not ingested		—	GAP	WGC requires site download (Goldhub); not fetched this pass
Commodity super-cycle	Geo-mean(gold, copper, WTI) / S&P 500	0.018 (2026-10-22)		13	Commodities cheap vs equities	Yahoo GC=F, HG=F, CL=F, ^GSPC
Supply concentration	China share, controlled minerals (USGS MCS 2026)	see table		—	Extreme (Ga, graphite, REE, W)	USGS MCS 2026

07 Gaps (honest)

- USGS MRDS/USMIN/NGDB bulk download: mrdata.usgs.gov returns 403 to the box (curl, 23 Oct) → deposit join uses hand-placed district centres (labelled).
- Geoscience Australia services.ga.gov.au 403; WA DMIRS/QLD, Ontario MLAS, BC MTO, GESTIM, BGS, EGDI, GEUS, Chile/Peru/DRC cadastres: not ingested this pass.
- BLM MLRS public layer has no location dates → staking-surge backtest impossible from it; needs MLRS bulk reports (reports.blm.gov) or county recorder data.
- NASA FIRMS needs a free MAP_KEY (registration = account creation, not done); VIIRS night lights not ingested.
- WGC central-bank gold: not fetched. SEDAR+/ASX owner mapping: not done.
- Internet Archive: search works (leads saved) but no deposit has been matched to a lapsed claim yet.

08 Who pays for this layer (JUDGEMENT)

- Resource/royalty funds and critical-minerals desks (event playbook + claim-pressure map).
- Government/strategic buyers and DFIs tracking Western supply response.
- Credit desks holding miner/battery-chain paper: export-control shock → forced-seller map in the TRIAGE credit layer.

09 TRIAGE Alpha Committee (adapted from AlphaAgents, arXiv:2508.11152)

Source paper: Zhao, Lyu, Jones, Garber, Pasquali, Mehta (BlackRock), *AlphaAgents: Large Language Model based Multi-Agents for Equity Portfolio Constructions*, arXiv:2508.11152v1, arxiv.org/html/2508.11152v1 (read in full 23 Oct 2026).

What we kept from the paper: role agents with data access restricted to their role (paper Table 1); the paper's coordinator prompt for debate ("every agent … has a chance to speak at least twice. Each agent can not decide for the whole group … You must invoke all agents before deciding to Terminate"); round-robin debate to consensus; explicit risk-neutral vs risk-averse profiles (§2.3); equal-weight portfolios from agent picks compared with single-agent portfolios and the benchmark using return and Sharpe (§3.2, §4.3); full debate logs kept for review.

Role mapping: paper Fundamental → *Forced Seller* (who must sell, from credit-spread shocks) and *LME* (CFTC managed-money positioning); paper Sentiment → *Signal/Radar* (trend/flow) and *Contrarian* (crowding); paper Valuation → *Valuation* (annualised return and volatility tools, exactly the paper's §2.2.3 formulas); added Macro (Dalio regime), which the paper names as future work.

What we changed, and why (honest): the agents are deterministic tool-based rules, not LLM calls. An LLM committee backtested on 2012–2026 would already 'know' those years from training data, so its backtest would be contaminated. The paper's prompts and our role prompts are stored in `committee.py` (PROMPTS) for a later LLM backend that runs only forward (live, paper-only). Debate rule: an agent whose conviction is below the mean conviction of disagreeing peers withdraws; nobody adopts a view without evidence; unresolved → majority, and the risk-averse profile takes no position on any dissent.

BACKTEST — MONTHLY, 22 CROSS-ASSET INSTRUMENTS, 2012-02-29 → 2026-09-30, LONG-ONLY EQUAL-WEIGHT, CASH WHEN NO BUY

risk-neutral, full period

PORTFOLIO	CAGR	VOL	SHARPE (NO RF)	MAX DD
Committee (debate)	9.0%	13.1%	0.69	-28.5%
Equal-weight benchmark	8.5%	13.2%	0.65	-29.1%
Single agent: signal	10.4%	19.6%	0.53	-44.5%
Single agent: valuation	8.6%	16.2%	0.53	-41.8%
Single agent: contrarian	-2.3%	11.7%	-0.19	-46.5%
Single agent: forced_seller	0.1%	0.4%	0.26	0%
Single agent: lme	-4.1%	17.9%	-0.23	-63.4%
Single agent: macro	1.0%	2.5%	0.39	-1.6%

risk-neutral, 2021 onward (rules fixed before; treat as out-of-sample)

PORTFOLIO	CAGR	VOL	SHARPE (NO RF)	MAX DD
Committee (debate)	10.2%	14.9%	0.68	-28.5%
Equal-weight benchmark	11.9%	13.3%	0.89	-18.3%
Single agent: signal	5.7%	18.9%	0.3	-44.5%
Single agent: valuation	12.6%	17.3%	0.73	-31.6%
Single agent: contrarian	2.6%	10.2%	0.26	-10.5%
Single agent: forced_seller	0.3%	0.7%	0.42	0%
Single agent: lme	-1.0%	14.2%	-0.07	-23.1%
Single agent: macro	2.5%	4.0%	0.63	-1.6%

Committee BUY calls: 1988; share that beat the equal-weight month: 47%.

risk-averse, full period

PORTFOLIO	CAGR	VOL	SHARPE (NO RF)	MAX DD
Committee (debate)	7.4%	14.0%	0.53	-38.5%
Equal-weight benchmark	8.5%	13.2%	0.65	-29.1%
Single agent: signal	10.4%	19.6%	0.53	-44.5%
Single agent: valuation	6.3%	10.0%	0.63	-27.6%
Single agent: contrarian	-2.3%	11.7%	-0.19	-46.5%
Single agent: forced_seller	0.1%	0.4%	0.26	0%
Single agent: lme	-4.1%	17.9%	-0.23	-63.4%
Single agent: macro	1.0%	2.5%	0.39	-1.6%

risk-averse, 2021 onward (rules fixed before; treat as out-of-sample)

PORTFOLIO	CAGR	VOL	SHARPE (NO RF)	MAX DD
Committee (debate)	10.1%	13.3%	0.76	-21.5%
Equal-weight benchmark	11.9%	13.3%	0.89	-18.3%
Single agent: signal	5.7%	18.9%	0.3	-44.5%
Single agent: valuation	13.0%	9.5%	1.38	-11.0%
Single agent: contrarian	2.6%	10.2%	0.26	-10.5%
Single agent: forced_seller	0.3%	0.7%	0.42	0%
Single agent: lme	-1.0%	14.2%	-0.07	-23.1%
Single agent: macro	2.5%	4.0%	0.63	-1.6%

Committee BUY calls: 1753; share that beat the equal-weight month: 47%.

Honest result: over the full period the risk-neutral committee edges the equal-weight benchmark (Sharpe 0.69 vs 0.65, max drawdown -28.5% vs -29.1%) and beats every single agent on Sharpe. From 2021 it **underperforms** the benchmark (Sharpe 0.68 vs 0.89), and the single Valuation agent is better than the committee (Sharpe 0.73; risk-averse 1.38). Only 47% of committee picks beat the equal-weight month. The paper's headline (multi-agent beats single agents and benchmark) is **not reproduced out-of-sample** here; debate mainly cuts drawdown versus single agents. Contrarian and LME agents lose money alone. This is why the product proof is the forward, hash-chained record, not this backtest.

PAPER-ONLY LIVE TRACK RECORD (HASH-CHAINED)

Ledger `track_record.jsonl`: 32 calls, chain verified = True. Each record holds entry (last public close), thesis (each agent's view), catalyst, exit rule, benchmark, previous hash and SHA-256 hash, logged in SGT. No trades placed; not advice to anyone.

First hash 891dbead90cbf53a… → last hash ce04c096409fd7d7…. To make the record externally verifiable, publish each day's last hash somewhere timestamped (e.g. a public git commit or an OpenTimestamps proof) — a user action, not done.

MONETISATION (JUDGEMENT) — THE TRACK RECORD IS THE PRODUCT PROOF

1. **Signal subscription** (impersonal, same feed to all subscribers; no personalised recommendations): radar + committee calls + mining layer. Fits the publisher-style exclusions below only if it stays impersonal and regularly published.
2. **Model-portfolio licence** to managers/platforms who run the money themselves (B2B data/IP licence). Still check per jurisdiction whether the licensee relationship counts as advice.
3. **Later: SMA or fund** — needs a licence in each place the money is managed or marketed. The user must handle this with counsel; nothing here is legal advice.

JURISDICTION	SOURCE (FETCHED 23 OCT 2026)	GRADE	EXACT QUOTE	WHAT IT MEANS FOR TRIAGE
Singapore (MAS)	https://sso.agc.gov.sg/Act/SFA2001?ProvIds=Sc2-	PRIMARY (statute)	“fund management” means managing the property of, or operating, a collective investment scheme, or undertaking on behalf of a customer … the management of a portfolio of capital markets products	An SMA or fund run from Singapore = regulated activity 'fund management' → capital markets services licence (or registered/licensed fund manager regime). Paid recommendations to Singapore clients may also be a financial advisory service under the Financial Advisers Act — FAA text not retrieved today (sso.agc.gov.sg timed out; mas.gov.sg licensing page in maintenance), so treat as OPEN.
United Kingdom (FCA)	https://www.legislation.gov.uk/ukpga/2000/8/section/19	PRIMARY (statute)	No person may carry on a regulated activity in the United Kingdom, or purport to do so, unless he is— (a) an authorised person; or (b) an exempt person.	Managing an SMA/fund needs Part 4A permission. A non-personalised periodical/data service can fall in the RAO art. 54 exclusion (below) only if its principal purpose is not advice or leading persons to buy/sell; personal recommendations are carved out (art. 54(2A)).
United Kingdom (FCA)	https://www.legislation.gov.uk/uksi/2001/544/article/54	PRIMARY (statute)	Paragraphs (1) and (2) do not apply to advice which is a personal recommendation falling within article 53(1A).	Signal subscriptions must stay non-personalised; FCA can certify a publication under art. 54(3).
United States (SEC)	https://www.law.cornell.edu/uscode/text/15/80b-2	SECONDARY copy of statute (LII)	publisher of any bona fide newspaper, news magazine or business or financial publication of general and regular circulation	Advisers Act §202(a)(11)(D) publisher exclusion covers impersonal, regularly published research; an SMA or tailored advice requires SEC or state investment-adviser registration.
United States (CFTC)	https://www.law.cornell.edu/cfr/text/17/4.14	SECONDARY copy of regulation (LII)	Providing commodity trading advice based on, or tailored to, the commodity interest or cash market positions or other circumstances or characteristics of particular clients	17 CFR 4.14(a)(9): CTA registration exemption only if advice is not tailored and no client accounts are directed. Futures-based model portfolios or managed futures accounts → CTA/CPO registration with the CFTC/NFA.

Gates before any money: (a) 12+ months of forward paper calls with the chain anchored publicly; (b) hit rate and excess return reported net of costs vs the stated benchmark; (c) a licensing opinion for each target jurisdiction.

DISCLAIMER AND PUBLISHER'S EXCLUSION

Published by TRIAGE for general information. Impersonal; not investment advice, a recommendation, or an offer or solicitation to buy or sell any security. Not tailored to any reader; intended to fall within the publisher's exclusion of section 202(a)(11)(D) of the US Investment Advisers Act of 1940. Facts are drawn from public filings and registries linked in the text; statements by parties are allegations; scenario figures are labelled assumptions. Companies only; no personal data.
